

Анализ файловой структуры UNIX. Команды для работы с файлами и каталогами

Плето Плето Мбамби¹

8 марта, 2023, Москва, Россия

¹Российский Университет Дружбы Народов

Цели и задачи работы

Цель лабораторной работы

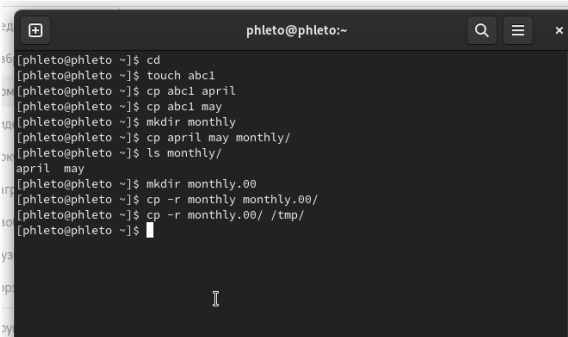

Ознакомление с файловой системой Linux, её структурой, именами и содержанием каталогов. Приобретение практических навыков по применению команд для работы с файлами и каталогами, по управлению процессами, по проверке использования диска и обслуживанию файловой системы.

Задачи лабораторной работы

- 1 Выполнить примеры
- 2 Выполнить действия по работе с каталогами и файлами
- 3 Выполнить действия с правами доступа
- 4 Получить дополнительные сведения при помощи справки по командам.

Процесс выполнения лабораторной работы

Выполнение примеров

```
phleto@phleto:~  
[phleto@phleto ~]$ cd  
[phleto@phleto ~]$ touch abc1  
[phleto@phleto ~]$ cp abc1 april  
[phleto@phleto ~]$ cp abc1 may  
[phleto@phleto ~]$ mkdir monthly  
[phleto@phleto ~]$ cp april may monthly/  
[phleto@phleto ~]$ ls monthly/  
april may  
[phleto@phleto ~]$ mkdir monthly.00  
[phleto@phleto ~]$ cp -r monthly monthly.00/  
[phleto@phleto ~]$ cp -r monthly.00/ /tmp/  
[phleto@phleto ~]$
```

Рис. 1: Выполнение примеров

Выполнение примеров

```
[phleto@phleto ~]$  
[phleto@phleto ~]$ mv april july  
[phleto@phleto ~]$ mv july monthly.00/  
[phleto@phleto ~]$ ls monthly.00/  
july  monthly  
[phleto@phleto ~]$ mv monthly.00/ monthly.01  
[phleto@phleto ~]$ mkdir reports  
[phleto@phleto ~]$ mv monthly.01/ reports/  
[phleto@phleto ~]$ mv reports/monthly.01/ reports/monthly  
[phleto@phleto ~]$
```

Рис. 2: Выполнение примеров

Выполнение примеров

```
[phleto@phleto ~]$ touch may
[phleto@phleto ~]$ ls -l may
-rw-r--r--. 1 phleto phleto 0 map 8 13:13 may
[phleto@phleto ~]$ chmod +x may
[phleto@phleto ~]$ ls -l may
-rwxr-xr-x. 1 phleto phleto 0 map 8 13:13 may
[phleto@phleto ~]$ chmod -x may
[phleto@phleto ~]$ ls -l may
-rw-r--r--. 1 phleto phleto 0 map 8 13:13 may
[phleto@phleto ~]$ mkdir monthly
mkdir: невозможно создать каталог «monthly»: Файл существует
[phleto@phleto ~]$ chmod o-r,g-r monthly/
[phleto@phleto ~]$ touch abc1
[phleto@phleto ~]$ chmod g+w abc1
[phleto@phleto ~]$
```

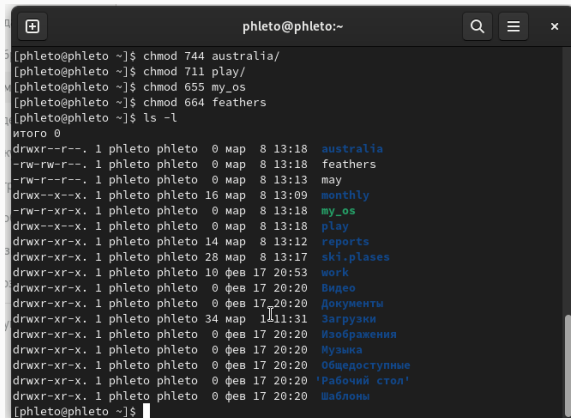

Рис. 3: Выполнение примеров

Создание директорий и копирование файлов

```
ok [phleto@phleto ~]$  
[phleto@phleto ~]$  
эгр [phleto@phleto ~]$ cp /usr/include/linux/sysinfo.h ~  
[phleto@phleto ~]$ mv sysinfo.h equipment  
зо [phleto@phleto ~]$ mkdir ski.plases  
[phleto@phleto ~]$ mv equipment ski.plases/  
уз [phleto@phleto ~]$ mv ski.plases/equipment ski.plases/equiplist  
[phleto@phleto ~]$ touch abc1  
[phleto@phleto ~]$ mv abc1 ski.plases/equiplist2  
дп [phleto@phleto ~]$ cd ski.plases/  
[phleto@phleto ski.plases]$ mkdir equipment  
ру [phleto@phleto ski.plases]$ mv equiplist equipment/  
[phleto@phleto ski.plases]$ mv equiplist2 equipment/  
[phleto@phleto ski.plases]$ cd  
[phleto@phleto ~]$ mkdir newdir  
[phleto@phleto ~]$ mv newdir/ ski.plases/  
[phleto@phleto ~]$ mv ski.plases/newdir/ ski.plases/plans  
[phleto@phleto ~]$
```

Рис. 4: Работа с каталогами

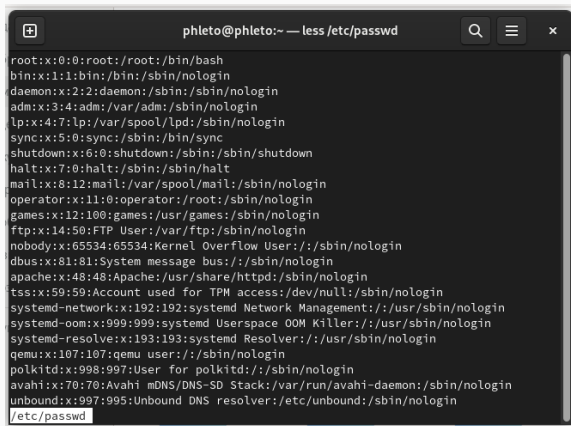

Работа с командой chmod

```
phleto@phleto:~  
[phleto@phleto ~]$ chmod 744 australia/  
[phleto@phleto ~]$ chmod 711 play/  
[phleto@phleto ~]$ chmod 655 my_os  
[phleto@phleto ~]$ chmod 664 feathers  
[phleto@phleto ~]$ ls -l  
итого 0  
drwxr--r--. 1 phleto phleto 0 мар 8 13:18 australia  
-rw-rw-r--. 1 phleto phleto 0 мар 8 13:18 feathers  
-rw-r--r--. 1 phleto phleto 0 мар 8 13:13 may  
drwx--x--x. 1 phleto phleto 16 мар 8 13:09 monthly  
-rw-r-xr-x. 1 phleto phleto 0 мар 8 13:18 my_os  
drwx--x--x. 1 phleto phleto 0 мар 8 13:18 play  
drwxr-xr-x. 1 phleto phleto 14 мар 8 13:12 reports  
drwxr-xr-x. 1 phleto phleto 28 мар 8 13:17 ski.plases  
drwxr-xr-x. 1 phleto phleto 10 фев 17 20:53 work  
drwxr-xr-x. 1 phleto phleto 0 фев 17 20:20 Видео  
drwxr-xr-x. 1 phleto phleto 0 фев 17 20:20 Документы  
drwxr-xr-x. 1 phleto phleto 34 мар 11 11:31 Загрузки  
drwxr-xr-x. 1 phleto phleto 0 фев 17 20:20 Изображения  
drwxr-xr-x. 1 phleto phleto 0 фев 17 20:20 Музыка  
drwxr-xr-x. 1 phleto phleto 0 фев 17 20:20 Общедоступные  
drwxr-xr-x. 1 phleto phleto 0 фев 17 20:20 'Рабочий стол'  
drwxr-xr-x. 1 phleto phleto 0 фев 17 20:20 Шаблоны  
[phleto@phleto ~]$
```

Рис. 5: Настройка прав доступа

Файл /etc/passwd

A terminal window titled 'phleto@phleto:~ — less /etc/passwd' displays the contents of the /etc/passwd file. The window has a search icon, a menu icon, and a close icon in the top right corner. The file content is listed line by line, showing system users and their associated shells and home directories. The last line, '/etc/passwd', is highlighted in white on a black background.

Работа с файлами и правами доступа

```
[phleto@phleto ~]$  
[phleto@phleto ~]$  
[phleto@phleto ~]$  
[phleto@phleto ~]$ cp feathers file.old  
[phleto@phleto ~]$ mv file.old play/  
[phleto@phleto ~]$ mkdir fun  
[phleto@phleto ~]$ cp -R play/ fun/  
[phleto@phleto ~]$ mv fun play/games  
[phleto@phleto ~]$ chmod u-r feathers  
[phleto@phleto ~]$ cat feathers  
cat: feathers: Отказано в доступе  
[phleto@phleto ~]$ cp feathers feathers2  
cp: невозможно открыть 'feathers' для чтения: Отказано в доступе  
[phleto@phleto ~]$ chmod u+x feathers  
[phleto@phleto ~]$ chmod -x play/  
[phleto@phleto ~]$ cd play/  
bash: cd: play/: Отказано в доступе  
[phleto@phleto ~]$ chmod +x play/  
[phleto@phleto ~]$
```

Рис. 7: Работа с файлами и правами доступа

The screenshot shows a terminal window titled "phleto@phleto:~ — man mount". The window displays the manual page for the 'mount' command, which is categorized under "System Administration". The page includes sections for NAME, SYNOPSIS, and a list of options. The NAME section states "mount - mount a filesystem". The SYNOPSIS section lists several command-line options: [-h|-V], [-l] [-t fstype], [-a [-fFnrsvw] [-t fstype] [-O optlist]], [-fnrsvw] [-o options] device mountpoint, [-fnrsvw] [-t fstype] [-o options] device mountpoint, --bind|--rbind|--move olddir newdir, and --make-[-shared|slave|private|unbindable|rshared|rslave|rprivate|runbindable]. The bottom of the window shows the status "Manual page mount(8) line 1 (press h for help or q to quit)".

```
phleto@phleto:~ — man mount
MOUNT(8)                                System Administration                                MOUNT(8)

NAME
    mount - mount a filesystem

SYNOPSIS
    mount [-h|-V]

    mount [-l] [-t fstype]

    mount -a [-fFnrsvw] [-t fstype] [-O optlist]

    mount [-fnrsvw] [-o options] device mountpoint

    mount [-fnrsvw] [-t fstype] [-o options] device mountpoint

    mount --bind|--rbind|--move olddir newdir

    mount
    --make-[-shared|slave|private|unbindable|rshared|rslave|rprivate|runbindable]
    mountpoint

Manual page mount(8) line 1 (press h for help or q to quit)
```

Рис. 8: Команда mount

```
phleto@phleto:~ — man fsck
FSCK(8)                               System Administration          FSCK(8)

NAME
    fsck - check and repair a Linux filesystem

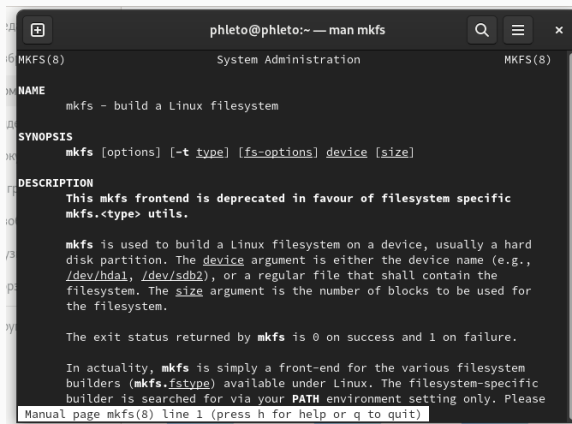

SYNOPSIS
    fsck [-lsAVRTMNP] [-r [fd]] [-C [fd]] [-t fstype] [filesystem...] [--]
    [fs-specific-options]

DESCRIPTION
    fsck is used to check and optionally repair one or more Linux
    filesystems. filesystem can be a device name (e.g., /dev/hdc1,
    /dev/sdb2), a mount point (e.g., /, /usr, /home), or an filesystem
    label or UUID specifier (e.g.,
    UUID=8868abf6-88c5-4a83-98b8-bfc24057f7bd or LABEL=root). Normally, the
    fsck program will try to handle filesystems on different physical disk
    drives in parallel to reduce the total amount of time needed to check
    all of them.

    If no filesystems are specified on the command line, and the -A option
    is not specified, fsck will default to checking filesystems in
    /etc/fstab serially. This is equivalent to the -As options.

Manual page fsck(8) line 1 (press h for help or q to quit)
```

Рис. 9: Команда fsck

A terminal window titled "phleto@phleto:~ — man mkfs" displays the manual page for the `mkfs` command. The window has a dark theme and standard terminal window controls (close, maximize, search). The content is as follows:

```

MKFS(8)                                System Administration                                MKFS(8)

NAME
    mkfs - build a Linux filesystem

SYNOPSIS
    mkfs [options] [-t type] [fs-options] device [size]

DESCRIPTION
    This mkfs frontend is deprecated in favour of filesystem specific
    mkfs.<type> utils.

    mkfs is used to build a Linux filesystem on a device, usually a hard
    disk partition. The device argument is either the device name (e.g.,
    /dev/hda1, /dev/sdb2), or a regular file that shall contain the
    filesystem. The size argument is the number of blocks to be used for
    the filesystem.

    The exit status returned by mkfs is 0 on success and 1 on failure.

    In actuality, mkfs is simply a front-end for the various filesystem
    builders (mkfs.fstype) available under Linux. The filesystem-specific
    builder is searched for via your PATH environment setting only. Please

Manual page mkfs(8) line 1 (press h for help or q to quit)
```

Рис. 10: Команда mkfs

```
phleto@phleto:~ — man kill
KILL(1)                                User Commands                                KILL(1)

NAME
    kill - terminate a process

SYNOPSIS
    kill [-signal|-s signal|-p] [-q value] [-a] [--timeout milliseconds
signal] [--] pid|name...

    kill -l [number] | -L

DESCRIPTION
    The command kill sends the specified signal to the specified processes
    or process groups.

    If no signal is specified, the TERM signal is sent. The default action
    for this signal is to terminate the process. This signal should be used
    in preference to the KILL signal (number 9), since a process may
    install a handler for the TERM signal in order to perform clean-up
    steps before terminating in an orderly fashion. If a process does not
    terminate after a TERM signal has been sent, then the KILL signal may
    be used; be aware that the latter signal cannot be caught, and so does
    not give the target process the opportunity to perform any clean-up

Manual page kill(1) line 1 (press h for help or q to quit)
```

Выводы по проделанной работе

В ходе данной работы мы ознакомились с файловой системой Linux, её структурой, именами и содержанием каталогов. Научились совершать базовые операции с файлами, управлять правами их доступа для пользователя и групп. Ознакомились с Анализом файловой системы. А также получили базовые навыки по проверке использования диска и обслуживанию файловой системы.
